

SERVICE

Pylon Electronics Inc. has a long history of designing and manufacturing various product lines over the years. These include telecommunications related equipment, ordnance detection equipment, ion mobility equipment, bus sign automation systems as well as the radon and thoron product lines.

Some examples of these products include the Models CDC-2 - Count Down Clock, 177 - Time Code Reader, 358A - Remote Display, etc. for the telecommunications related equipment and the Models VMOD - Vehicle Mounted Ordnance Detector, ROMMIDS - Robotic Metallic Mine Detection System for ordnance detection equipment.

Pylon is presently supporting the bus sign automation systems in a repair and overhaul capacity.

Pylon can still support most of the telecommunication products line and is even able to manufacture replacement units, if required.
